Notes on puzzle Completion Statuses: 3/7/26

- The puzzle prefab has the PuzzleInformation.cs Script attached, which is tied to the puzzle terminal.
- When interacting with the terminal, the InteractablePillar.cs Script fires an event containing the PuzzleInformation data.
- Right now, ViewManager (a subscriber to the event) just automatically updates the UI & the camera, & then fires off an event to change the game state to puzzle mode.
- Perhaps a check can be added in there regarding the puzzle's status -- or it can be added even earlier on via the InteractablePillar.cs Script.
